

## Dr Anthony Maloof

Corneal and Oculoplastic Surgeon

Dr Maloof specialises in advanced Cornea and Oculoplastic surgery, or in layman's terms, surgery of the [Eyes and Face](#). After receiving a medical degree and basic medical training at the Prince of Wales Hospital, Dr Maloof obtained a Masters in Biomedical Engineering at UNSW, and then became the last trainee of the late Professor Fred Hollows. Finishing specialty training at a young age, Dr Maloofs unique holistic approach has arisen from spending 3 years in England obtaining advanced surgical skills in the traditionally separate fields of Cornea and Oculoplastic Surgery. Dr Maloof continues training specialists at the Prince of Wales Hospital and Sydney Eye Hospital and receives referrals from many of the current practicing specialists who he trained.

When it comes to surgery of the Eyes and Face, Dr Maloof is conservatively aggressive: he is not afraid of complex procedures, but careful to select the procedure that is right for the individual. Being unafraid to question the limits of current surgical thinking has given Dr Maloof a reputation as a fixer, lateral thinker, and leader in advancing surgical techniques. Dr Maloofs advice is clearly structured, tailored to the needs of the individual, and with over 20 years of specialty experience, direct in telling patients when surgery is unlikely to provide benefit. Dr Maloof is skilled in providing a diagnosis, options for treatment, and most importantly, putting in the time to ensure you understand.
